CDAC MUMBAI

PySpark:

1. How can you calculate the average revenue per seat for each year and quarter?
 2. What is the PySpark code to find the year and quarter with the highest average revenue per seat?
 3. How can you calculate the total number of booked seats for each year and quarter?
 4. What is the PySpark code to determine the year and quarter with the highest total number of booked seats?
 5. How can you calculate the total revenue generated for each year and quarter (revenue = average revenue per seat * total number of booked seats)?
 6. What is the PySpark code to identify the year and quarter with the highest total revenue?
 7. How can you find the average revenue per seat across different years using PySpark?
 8. What is the PySpark code to determine the year with the highest average revenue per seat?
 9. How can you calculate the overall average revenue per seat for the entire dataset using PySpark?
-

PySQL:

1. How can you create a database and table in PySQL to store the airline CSV data?
2. What is the PySQL query to calculate the average revenue per seat for each year and quarter?
3. How can you find the year and quarter with the highest average revenue per seat using PySQL?
4. What is the PySQL query to calculate the total number of booked seats for each year and quarter?
5. How can you determine the year and quarter with the highest total number of booked seats using PySQL?
6. What is the PySQL query to calculate the total revenue generated for each year and quarter (revenue = average revenue per seat * total number of booked seats)?
7. How can you identify the year and quarter with the highest total revenue using PySQL?
8. What is the PySQL query to find the average revenue per seat across different years?
9. How can you determine the year with the highest average revenue per seat using PySQL?
10. What is the PySQL query to calculate the overall average revenue per seat for the entire dataset?

-
1. What is the average revenue per seat for each year and quarter?
 2. Which year and quarter had the highest average revenue per seat?
 3. How does the average revenue per seat vary across different quarters within a year?
 4. What is the total number of booked seats for each year and quarter?
 5. Which year and quarter had the highest total number of booked seats?
 6. How does the total number of booked seats vary across different quarters within a year?
 7. What is the total revenue generated for each year and quarter (revenue = average revenue per seat * total number of booked seats)?
 8. Which year and quarter had the highest total revenue?
 9. How does the total revenue vary across different quarters within a year?
 10. Can you identify any trends or patterns in the revenue or number of booked seats over the years?
 11. How does the average revenue per seat vary across different years?
 12. Which year had the highest average revenue per seat?
 13. What is the overall average revenue per seat for the entire dataset?
 14. Can you identify any seasonal trends in the average revenue per seat?
 15. How does the total number of booked seats vary across different years?
 16. Which year had the highest total number of booked seats?
 17. What is the overall total number of booked seats for the entire dataset?
 18. Can you identify any seasonal trends in the total number of booked seats?
 19. How does the total revenue generated vary across different years?
 20. Which year had the highest total revenue generated?
