

1. Suppose you have a list of temperatures recorded every hour for a week. Write a Python code to find the highest temperature from the list.
2. You have a list of grocery items and their prices. Write a Python code to calculate the total cost of the groceries.
3. Imagine you have a list of stock prices for a particular company. Write a Python code to find the percentage increase or decrease in the stock price from the first day to the last day.
4. You have a list of names and their ages. Write a Python code to find the name of the oldest person in the list.
5. You have a list of strings representing sentences. Write a Python code to count the number of words in each sentence and store them in a new list.
6. Imagine you have a list of email addresses. Write a Python code to create a new list that contains only the email addresses that end with ".com".
7. You have a list of numbers. Write a Python code to create a new list that contains only the odd numbers from the original list.
8. Suppose you have a list of dictionaries where each dictionary contains information about a person such as name, age, and address. Write a Python code to create a new list that contains only the names of the people in the list.
9. You have a list of strings representing book titles. Write a Python code to create a new list that contains only the titles that contain the word "Python".
10. Imagine you have a list of tuples where each tuple contains a name and a phone number. Write a Python code to create a new list that contains only the phone numbers.
11. You have a list of numbers. Write a Python code to create a new list that contains the squares of the numbers in the original list.
12. Suppose you have a list of strings representing file names. Write a Python code to create a new list that contains only the file names that have the extension ".txt".

13. Imagine you have a list of tuples where each tuple contains a name and a salary. Write a Python code to create a new list that contains only the names of the people who earn more than \$50,000 per year.
14. You have a list of strings representing sentences. Write a Python code to create a new list that contains only the sentences that contain the word "Python" and "programming".
15. Suppose you have a list of integers. Write a Python code to create a new list that contains only the integers that are divisible by 3.
