Probability

Q. In a box, there are 8 red, 7 blue and 6 green balls. One ball is picked up randomly. What is the probability that it is neither red nor green?

- A. $\frac{1}{3}$ B. $\frac{3}{4}$ C. $\frac{7}{19}$ D. $\frac{8}{21}$ E. $\frac{9}{21}$

Soln:

- Total balls = $8+7+6 = 21$ balls in the box
- Neither red nor green means only blue
- Draw = 1 ball

$$\text{Probability} = \frac{\text{Favourable outcome}}{\text{Total number of outcomes}} = \frac{1 \text{ blue out of total } 7}{21C_1} = \frac{7C_1}{21C_1} = \frac{7}{21} = \frac{1}{3}$$

Q. In a class, there are 15 boys and 10 girls. Three students are selected at random. The probability that 1 girl and 2 boys are selected, is:

- A. 21/46 B. 25/117 C. 1/50 D. 3/25

Soln:

- Total students = 15 + 10 = 25 students in a class
- Draw = 3 students

$$\text{Probability} = \frac{\text{Favourable outcome}}{\text{Total number of outcomes}} = \frac{{}^{10}C_1 \times {}^{15}C_2}{{}^{25}C_3} = \frac{21}{46}$$

Q. What is the probability of getting a sum 5 from two throws of a dice?

- A. $\frac{1}{9}$ B. $\frac{1}{8}$ C. $\frac{1}{7}$ D. $\frac{1}{6}$

Soln-

Dice = 6 faces = 6 possibilities

So in two throws of dice, total possibilities = $6 \times 6 = 36$

Sum = 5, so favourable outcomes are - $\{ (1,4), (4,1), (2,3), (3,2) \}$

$$\text{Probability} = \frac{\text{Favourable outcome}}{\text{Total number of outcomes}} = \frac{4}{36} = \frac{1}{9}$$

- $A \cap B$ is used for the largest set which contains all the elements that are common to both the sets.
- $n(A \cap B) = n(A) + n(B) - n(A \cup B) \rightarrow$ **addition theorem of probability.**
- Total students who play either Cricket or football or both cricket and football
- $= n(A \cup B) = 450 - 50 = 400$
- students who play cricket, $n(A) = 325$ and students who play football, $n(B) = 175$
- Students who play both football and Cricket $= n(A \cap B) = 325 + 175 - 400 = 100$

Time & Work

- Work (Effort) = Manpower x time.
- If A can do a piece of work in x days then work done by A in one day is equal to $\frac{1}{x}$ of the entire work.
- If A is twice as good a workman as B then A will take half the time taken by B to do a same piece of work.
- If number of people to do a certain work is increased (or decreased) the time taken to do the same work will decrease (or increase)
- Total work = LCM
- Efficiency = $\frac{\text{Total work}}{\text{Total time}}$
- OR
- Total work = Efficiency x Total time

Time & Work

Q. A, B & C can complete a certain work in 10, 12 & 15 days respectively. If all of them work together in how many days will the work get completed?

Soln:

We know, Total work = Days x units/day

$$\text{LCM}(10, 12, 15) = 60$$

In one day, $A+B+C = 6+5+4 = 15$ units

So to complete TW = 60 units, days = ?

$$\text{days} = \frac{60}{15} = 4. \text{ So 4 days are needed to complete the work.}$$

Time & Work

Q. Two persons A & B can complete a work in 20 & 30 days respectively. If both of them start together but A stops after 10 days then how many days will the work last?

A. 7 days

B. 8 days

C. 15 days

D. 10 days

Soln: LCM(20,30) = 60

A after 10 days, $3 \times 10 = 30$ units & B after 10 days = $2 \times 10 = 20$ units

Total units = 60, Remaining units = total – A + B(after 10 days)

$$= 60 - 50 = 10 \text{ units}$$

Days needed to do 10 units work = $\frac{10}{2} = 5$ days

So Total Duration = $10 + 5 = 15$ days

Ans: C

Time & Work

Q. Two persons A & B can complete a work in 20 days , B & C can complete it in 24 days & C and A can complete it in 40 days. Find in how many days will B complete the work alone?

A. 30 days

B. 40 days

C. 50 days

D. 60 days

• **Soln:** $\text{LCM}(20,24,40) = 120$

No of workers

$$2 \times (A+B+C) = 6+5+3 = 14 \quad \text{i.e. } 2(A+B+C)\text{'s } 1 \text{ day work}$$

$$A + B + C = 14/2 = 7$$

$$B = 7 - (A+C)$$

$$B \text{ alone} = 7 - 3 = 4 \text{ units/day}$$

$$\text{To find days needed by B} = \frac{\text{Total work}}{\text{units/day}} = \frac{120}{4} = 30 \text{ days}$$

So , 30 days are needed by B to complete the work alone.

D. 30 days

• **Soln:** $\text{LCM}(20,16) = 80$

• Day 1, A = 4 units

• Day2, day 1 work added

• B = 5 + 4 = 9units

• 9 units --- 2 days

• 80 units --- ?

• Days = $\frac{80 \times 2}{9} = \frac{160}{9} = 17.7777 = 17.78$ days

Work done by A alone = $18 \times 4 = 72$ units

Remaining work = Total units – work done by A = $96 - 72 = 24$ units

B should be closed after = $\frac{24}{3} = 8$ mins.

$$\begin{aligned} \text{Time} &= 1 - \frac{\text{full tank time}}{\text{1st pipe time}} \times \text{2nd pipe time} \\ &= (1 - 18/24) \times 32 \\ &= 8 \text{ mins} \end{aligned}$$

Q. 12 buckets of water fill a tank when the capacity of each bucket is 13.5 litres. How many buckets will be needed to fill the same tank, if the capacity of each bucket is 9 litres?

A. 8

B. 15

C. 16

D. 18

Ans: D

Capacity of the tank = (12×13.5) litre
= 162 litres

Capacity of each bucket = 9 litres

Number of buckets needed = $162 / 9$
= 18 buckets

Q. Bucket P has thrice the capacity as bucket Q. It takes 60 turns for bucket P to fill the empty tank. How many turns it will take for both P and Q, having each turn together to fill the tank?

- A. 30 B. 40 C. 45 D. 90

Soln-

$$P = 3Q$$

60 turns of P = capacity of tank

$$60P = \text{capacity of tank}$$

$$60(3Q) = \text{capacity of tank}$$

$$180Q = \text{capacity of tank}$$

P+Q work together.

$$\text{Amount of water poured together} = P + Q$$

$$= 3Q + Q = 4Q$$

$$\text{Number of turns} = 180Q/4Q = 45 \text{ turns}$$

Q. 12 men and 16 boys can do a piece of work in 5 days. 13 men and 24 boys can do it in 4 days. The ratio of the daily work done by a man and a boy is –

A. 2 : 1

B. 3 : 1

C. 3 : 2

D. 5 : 4

Soln:

$$W = M \times D$$

and

$$W = M \times D$$

$$W = (12m + 16b) \times 5$$

$$W = (13m + 24b) \times 4$$

$$= 60m + 80b$$

$$= 52m + 96b$$

As , work done is same, equating both sides ,we get,

$$60m + 80b = 52m + 96b$$

$$60m - 52m = 96b - 80b$$

$$8m = 16b$$

$$m = 2b$$
