

1. Write a program that takes a number as input and prints out whether it is an even or odd number.
2. Write a program that takes a year as input and prints out whether it is a leap year or not.
3. Write a program that takes a string as input and checks whether it is a palindrome or not.
4. Write a program that takes three numbers as input and prints out the largest one.
5. Write a program that takes a sentence as input and counts the number of words in it.
6. Write a program that takes a list of numbers as input and prints out the sum of all the numbers.
7. Write a program that takes a list of strings as input and prints out the longest string.
8. Write a program that takes two lists of numbers as input and prints out the common elements between the two lists.
9. Write a program that takes a list of numbers as input and prints out the numbers in ascending order.
10. Write a program that takes a list of strings as input and removes all duplicates from the list.
11. Write a program that takes a string as input and prints out the frequency of each character in the string.
12. Write a program that takes a string as input and checks whether it is a pangram or not.
13. Write a program that takes a list of numbers as input and prints out the median value.
14. Write a program that takes two strings as input and checks whether they are anagrams or not.
15. Write a program that takes a list of numbers as input and finds the second largest number in the list.
16. Write a program that takes a list of numbers as input and finds the sum of all the even numbers in the list.
17. Write a program that takes a string as input and prints out the words in reverse order.
18. Write a program that takes a list of numbers as input and prints out the numbers in descending order.
19. Write a program that takes a list of strings as input and prints out the strings in alphabetical order.
20. Write a program that takes a list of numbers as input and checks whether it is a Fibonacci sequence or not.
21. Write a program that takes a string as input and prints out the longest palindrome in the string.
22. Write a program that takes a list of strings as input and removes all strings that contain the letter "a".

23. Write a program that takes a list of numbers as input and checks whether it contains any duplicates.
24. Write a program that takes a list of strings as input and prints out the strings that are palindromes.
25. Write a program that takes a string as input and prints out the most common word in the string.
26. Write a program that takes a list of numbers as input and finds the product of all the numbers.
27. Write a program that takes a string as input and removes all the vowels from the string.
28. Write a program that takes a list of numbers as input and checks whether it is a prime number sequence or not.
29. Write a program that takes a list of strings as input and checks whether all the strings are of the same length.
30. Write a program that takes a string as input and checks whether it is a pangram or not, using only lowercase letters.
31. Write a program that takes a list of numbers as input and checks whether the list is sorted in ascending order.
32. Write a program that takes a string as input and prints out the number of uppercase letters and lowercase letters in the string.
33. Write a program that takes two lists of numbers as input and prints out a new list containing the elements that are in the first list but not in the second list.
34. Write a program that takes a list of numbers as input and finds the smallest positive integer that is not in the list.
35. Write a program that takes a string as input and prints out the number of words that contain at least one vowel.
36. Write a program that takes a list of numbers as input and prints out the numbers that are perfect squares.
37. Write a program that takes a string as input and prints out the number of times each word appears in the string.
38. Write a program that takes a list of strings as input and prints out the strings that contain only uppercase letters.
39. Write a program that takes a list of numbers as input and prints out a new list where each element is the product of all the elements in the original list except for the current element.
40. Write a program that takes a string as input and checks whether it is a palindrome or not.
