

1. Write a Python program that accepts a string and calculate the number of digits and letters.

Sample Data : Python 3.2

Expected Output :

Letters 6

Digits 2

2. Write a Python program to check a triangle is equilateral, isosceles or scalene

Note :

An equilateral triangle is a triangle in which all three sides are equal.

A scalene triangle is a triangle that has three unequal sides.

An isosceles triangle is a triangle with (at least) two equal sides.

Expected Output:

Input lengths of the triangle sides:

x: 6

y: 8

z: 12

Scalene triangle

3. Write a Python program to construct the following pattern, using a nested loop number.

Expected Output:

1

22

333

4444

55555

666666

7777777
88888888
999999999

4. Write a Python program to find the most common elements and their counts of a specified text. Original string: lkseropewdssafsdafkpw
Most common three characters of the said string:
[('s', 4), ('e', 3), ('f', 3)]

5. Write a Python program to compute the sum of first n given prime numbers.

Input:

n (n <= 10000). Input 0 to exit the program.

Input a number (n<=10000) to compute the sum:(0 to exit)

25

Sum of first 25 prime numbers:

1060

6. Write a Python program to filter a dictionary based on values.

Original Dictionary:

{'Cierra Vega': 175, 'Alden Cantrell': 180, 'Kierra Gentry': 165, 'Pierre Cox': 190}

Marks greater than 170:

{'Cierra Vega': 175, 'Alden Cantrell': 180, 'Pierre Cox': 190}
